

INTERNSHIP REPORT

Typing Tutor Web Application

Submitted By:

Alaghari Saipreetam

Regd No: 234203

Under the guidance of:

Prof. N Uday Kiran,
(HOD, DMACS SSSIHL-PSN)

Dr. V Bhaskaran
(AHOD, DMACS SSSIHL-NDG)

Dr. K. Vengatakrishnan
(Assistant Professor,
DMACS SSSIHL-NDG)

Organization	Sri Sathya Sai Vidya Vahini
Project	Typing Tutor Web Application
Duration	8 Weeks
Domain	Front-End Web Development
Technologies	HTML5, CSS3, JavaScript (Vanilla JS), Git

Academic Year: 2025 – 2026

A. Internship Work Summary

The following section presents a chronological overview of the work carried out during the 8-week internship at Sri Sathya Sai Vidya Vahini, organized by phase.

Phase 1 – Project Orientation and Setup (Weeks 1–2)

- Introduced to the organization's mission of delivering inclusive, gamified education.
- Studied the existing codebase across the four main screens and all 32 level files.
- Set up the development environment, Git workflow, and local server using VS Code Live Server.
- Reviewed coding standards, project structure, JavaScript conventions, and localStorage patterns.
- Performed a technical audit of 170+ project files to identify bugs and improvement areas.

Phase 2 – Core Feature Development (Weeks 3–5)

- Designed and developed the Welcome (Index), Home, Typing Levels, and Results pages with a responsive, child-friendly, and visually engaging interface.
- Redesigned the landing page using a responsive gradient theme, animated mascot characters, and interactive UI components to enhance accessibility and user engagement.
- Integrated the class selection popup, dashboard navigation, settings panel, and smooth page transitions.
- Enhanced the typing interface with a virtual keyboard, finger-placement guidance, theme switching, background music, and typing metrics.
- Implemented user engagement features including daily tips, progress tracking, welcome messages, animated feedback, and intuitive results page navigation to provide a more interactive learning experience.

Phase 3 – Gamification and UX Enhancements (Weeks 6–7)

- Refined the interface with improved visual consistency, responsive layouts, and child-friendly design.
- Enhanced the typing experience with WPM, accuracy, timer, and intuitive navigation controls.
- Improved dashboard usability through personalized progress tracking, daily learning tips, and interactive user feedback.
- Optimized interface responsiveness with smooth animations, transitions, and accessibility improvements.
- Enhanced the overall learning experience by integrating customizable themes, immersive background audio, and interactive visual elements.

Phase 4 – Responsive Design, Testing, and Documentation (Week 8)

- Performed comprehensive functional and responsive testing across the application, identifying and resolving UI inconsistencies and usability issues.
- Refined application components through code review, debugging, and iterative improvements.
- Verified features against project guidelines through regular mentor reviews.
- Maintained project documentation and GitHub updates by recording development progress and completed milestones.
- Deployed the application on Netlify and verified its responsiveness, functionality, and overall performance through real-world testing and final optimizations.

B. List of Contributions Identified

The following specific contributions were made by the intern during the 8-week engagement:

1. Designed and developed the Welcome (Index), Home, Typing Levels, and Results pages.
2. Redesigned the landing page using a responsive gradient theme with child-friendly visual styling.
3. Integrated animated mascot characters, welcome interactions, and smooth UI transitions.
4. Developed the class selection popup, dashboard navigation, settings panel, and page navigation.
5. Enhanced the typing interface with a virtual keyboard, finger-placement guidance, WPM, timer, and accuracy indicators.
6. Implemented progress tracking, daily tips, welcome messages, and interactive user feedback.
7. Integrated customizable themes, immersive background music, and responsive UI components.
8. Improved interface responsiveness, accessibility, and cross-device compatibility.
9. Performed functional testing, manual debugging, and iterative UI refinements across the application.
10. Maintained project documentation, GitHub progress updates, and implementation records.
11. Deployed the application on Netlify and validated responsiveness, functionality, and performance.

C. Timeline of Activities

Week(s)	Phase	Key Activities
1–2	Orientation & Setup	Codebase review, environment setup, Git workflow, coding/UX guideline study
3	Core UI Development	Welcome page, Home page, responsive layout, gradient theme
4	Navigation & Typing Interface	Glassmorphism header, dashboard, settings, virtual keyboard, typing metrics
5	Interactive Features	Mascot interactions, progress tracking, daily tips, results page
6	UI/UX Enhancements	Theme customization, animations, responsive improvements, accessibility
7	Music & Optimization	Background music integration, CSS performance tuning, will-change, clamp()
8	Testing & Deployment	Functional testing, debugging, documentation, Netlify deployment

1. Introduction

This report presents the work completed during an 8-week internship at **Sri Sathya Sai Vidya Vahini (SSSVV)** as part of the Bachelor of Science in Computer Science program. The internship provided an opportunity to apply web development concepts in a real-world educational software project focused on inclusive digital learning.

The primary assignment involved developing and enhancing a browser-based **Typing Tutor Web Application** designed to improve students' typing skills through interactive lessons. The work included designing responsive user interfaces, implementing new features, enhancing user experience, integrating performance-tracking components, and improving the application's overall usability and responsiveness.

The project emphasized creating an engaging, accessible, and child-friendly learning environment while following modern web development practices and responsive design principles. Throughout the internship, practical exposure to collaborative development, UI/UX design, testing, documentation, and deployment further strengthened both technical and problem-solving skills.

2. Organization Overview

Sri Sathya Sai Vidya Vahini (SSSVV), an initiative of the Sri Sathya Sai Central Trust, provides inclusive and accessible digital learning resources for children of diverse abilities and backgrounds. Supporting the vision of India's National Education Policy (NEP) 2020, the organization develops technology-enabled educational content based on Universal Design for Learning (UDL) principles.

Through its Inclusive Education Project and collaboration with the Government of India on the DIKSHA platform, SSSVV creates interactive, multi-sensory learning resources while promoting educational accessibility, teacher capacity building, and support for Children with Special Needs (CWSN).

The organization's educational and technology philosophy is centered on:

- Inclusive and accessible learning for all students.
- Universal Design for Learning (UDL) principles.
- Interactive and multi-sensory learning experiences.
- Empowerment of Children with Special Needs (CWSN).
- Technology-driven educational outreach.
- Capacity building for teachers and educational stakeholders.

3. Internship Objectives

The following objectives were established at the commencement of the internship:

1. To understand and contribute to the development of a live educational web application.
2. To design responsive, accessible, and child-friendly user interfaces aligned with the organization's educational vision.
3. To implement new features and enhance existing functionalities based on project requirements.

4. To integrate typing performance features such as WPM, timer, accuracy, and progress tracking.
5. To improve usability through interactive feedback, animations, and engaging learning elements.
6. To enhance application responsiveness, accessibility, and overall user experience across multiple devices.
7. To follow clean coding practices, maintain project documentation, and collaborate using Git version control.
8. To perform testing, debugging, and deployment while ensuring application stability and responsiveness.

4. Technologies and Tools Used

Core Technologies

Technology	Purpose / Usage
HTML5	Semantic page structure and application layout
CSS3	Responsive design, animations, gradients, and custom styling
JavaScript (Vanilla JS)	Interactive features, typing logic, DOM manipulation, and performance tracking
Google Fonts (Fredoka)	Primary typeface chosen for its rounded, child-friendly character set
Font Awesome 5	Icon library used for UI icons and decorative elements
Git	Version control for tracking changes and maintaining code history
VS Code Live Server	Local development and testing
Netlify	Application deployment and hosting

5. Work Carried Out During the Internship

5.1 Project Familiarization and Development Setup

The internship began with a detailed study of the existing Typing Tutor Web Application to understand its architecture, workflow, and development practices. The project structure, source code, and UI flow were analyzed across the core application pages, while Git version control and the local development environment were configured to support efficient collaboration.

The application's coding standards, modular folder organization, JavaScript conventions, and browser-based data management were also reviewed before initiating feature development. This initial analysis provided a clear understanding of the system and established the foundation for the subsequent design, development, and enhancement activities.

5.2 User Interface Development

A major part of the internship focused on redesigning and enhancing the user interface of the Typing Tutor Web Application to create a more engaging, responsive, and child-friendly learning environment. The existing interface was modernized with improved layouts, intuitive navigation, consistent visual styling, and interactive design elements while preserving the application's core functionality.

The redesigned interface included the Welcome (Index), Home, Typing Levels, and Results pages. Key improvements included responsive layouts, a refreshed visual theme, animated mascots, enhanced navigation components, and interactive UI elements that collectively improved accessibility, usability, and the overall learning experience.

Figure 5.1: Comparison of the Welcome (Index) page before and after redesign, highlighting improvements in visual design, responsiveness, and user engagement.

Figure 5.2: Comparison of the Home page before and after enhancement, showcasing the improved layout, navigation, and interactive interface components.

5.3 Interactive Learning Features

The Typing Tutor Web Application was further enhanced by integrating several interactive features that support an engaging and effective learning experience. The typing interface was designed to provide real-time performance tracking through Words Per Minute (WPM), typing accuracy, and timer-based activities, enabling users to monitor their progress throughout each session.

Additional enhancements such as the virtual keyboard, finger-placement guidance, personalized progress tracking, daily learning tips, customizable themes, background audio, and an improved results page contributed to a more interactive, accessible, and learner-friendly environment.

Figure 5.3: Comparison of the Typing page before and after enhancement, illustrating the integration of interactive typing assistance, performance indicators, and improved user experience.

Figure 5.4: Comparison of the Results page after enhancement, demonstrating the redesigned performance summary interface. The updated layout provides a clear presentation of key typing metrics, including Words Per Minute (WPM), typing accuracy, and completion time, along with intuitive navigation controls for replaying levels or returning to the home page. These enhancements improve result interpretation, user feedback, and the overall post-activity learning experience.

5.4 Testing, Optimization and Deployment

The final phase of the internship focused on validating the application's functionality, improving overall stability, and preparing it for deployment. Functional testing, responsive testing, and manual verification were carried out across different pages to identify usability issues and ensure a consistent user experience.

The application was further refined through iterative debugging, interface optimization, and mentor-guided reviews. Development progress was documented throughout the project using GitHub, and the final application was successfully deployed on Netlify, where its responsiveness, functionality, and overall performance were verified across multiple devices and screen sizes.

Figure 5.5: Responsive testing of the Typing Tutor Web Application across multiple screen sizes, demonstrating consistent layouts, adaptive interface behavior, and an optimized user experience on desktop and mobile devices.

The final phase of the internship focused on validating the functionality, usability, and responsiveness of the Typing Tutor Web Application. Each module was thoroughly tested to identify interface inconsistencies, navigation issues, and functional errors, followed by iterative debugging and refinement to improve the overall stability and user experience.

Special attention was given to ensuring responsive behavior across different screen sizes and maintaining consistency throughout the application. The completed project was version-controlled using Git and documented regularly through GitHub, enabling systematic progress tracking and collaborative development practices.

After successful testing and validation, the application was deployed on **Netlify** for real-world verification. The deployed version was reviewed to confirm proper functionality, responsive performance, and successful integration of all implemented features, ensuring that the application was ready for end-user interaction.

6. My Specific Contributions

This section details the intern's direct, individual contributions to the project. Each contribution is described in terms of the problem it addressed, the approach taken, technologies used, and the outcome achieved.

6.1 Welcome (Index) Page Redesign

Objective:

The original Welcome page consisted of a static background with minimal interactive elements and limited responsiveness, resulting in a less engaging first impression. The objective of this redesign was to create a modern, visually appealing, and fully responsive landing page that aligns with the child-friendly learning environment of the Typing Tutor Web Application.

Design and Implementation:

The redesign process began by experimenting with a three-dimensional visual theme using custom mascot illustrations and a scenic background image. Although the initial concept improved the visual appearance, the image-based layout introduced responsiveness issues across different screen sizes and device orientations. To overcome this challenge, the interface was redesigned using a responsive gradient background combined with animated floating elements, providing a scalable solution while maintaining an attractive and playful appearance.

To further enhance the user experience, the landing page was expanded with animated mascot characters, interactive welcome elements, intuitive navigation controls, a class selection popup, settings access, and smooth page transitions. Additional attention was given to layout spacing, component sizing, and responsive positioning to ensure visual consistency and usability across desktop, tablet, and mobile devices.

Figure 6.1: Welcome (Index) page before and after redesign, illustrating the transformation from a static interface into a modern, responsive, and child-friendly landing page with enhanced navigation and interactive visual elements.

Technical Highlights:

- Replaced the static background with a responsive CSS gradient layout to improve adaptability across multiple screen sizes.
- Designed an engaging landing interface using animated mascots, floating background elements, and child-friendly visual styling.
- Integrated class selection, settings access, and navigation controls to improve usability and accessibility.
- Applied responsive layout techniques, reusable styling components, and smooth transition effects for a consistent user experience.

Listing 6.1: CSS implementation demonstrating the responsive gradient background and animation techniques used to enhance the Welcome page interface.

Listing 6.2: CSS implementation of the floating mascot animation using keyframes, smooth transformations, and shadow effects to create a lively and engaging visual experience for young learners.

Outcome:

The redesigned Welcome page established a strong visual identity for the application while significantly improving responsiveness, accessibility, and user engagement. The enhanced interface provides an inviting first impression and creates a seamless entry point into the learning experience, forming the foundation for the application's overall user interface.

6.2 Home Page Development & Dashboard Interface

Objective:

The Home page was redesigned to serve as the central dashboard of the Typing Tutor Web Application, providing learners with an intuitive interface to access levels, monitor progress, and navigate through different modules. The primary objective was to create a responsive, engaging, and child-friendly dashboard that enhances usability while supporting future feature expansion.

Design and Implementation:

The Home page was developed by studying modern educational and typing platforms to understand effective dashboard layouts, navigation, and learner engagement techniques. Based on these observations, a customized, responsive interface was designed to match the project's visual identity while improving accessibility and usability. The dashboard includes navigation to major modules, learner profile management, and logout functionality.

The central dashboard displays level progression, completed levels, and typing accuracy statistics in a structured layout. A vertically scrollable level container was implemented to support future scalability while maintaining a clean interface.

To enhance engagement, motivational tips, animated welcome messages, live progress tracking, randomized background music, and a floating settings panel with themes, sound controls, results, shortcuts, and application information were integrated using reusable responsive UI components.

Figure 6.2: Annotated Home page interface highlighting the major dashboard components, including navigation controls, learner profile, progress statistics, level selection, daily learning tips, settings panel, and personalized learning features.

Technical Highlights:

- Designed a centralized dashboard for intuitive navigation.
- Implemented learner profile, progress statistics, and level management.
- Developed scrollable level organization for future scalability.
- Integrated motivational tips, randomized background music, and interactive settings.
- Applied responsive layout techniques to maintain consistency across devices.

Listing 6.3 – Random Background Music Selection

```

1  /* Random Background Music Selection */
2  function pickTrack(tracks) {
3      var last = localStorage.getItem("type-tutor-last-track") || "";
4
5      var pool = tracks.filter(function (track) {
6          return track !== last;
7      });
8
9      if (!pool.length) pool = tracks;
10
11     var selectedTrack =
12         pool[Math.floor(Math.random() * pool.length)];
13
14     localStorage.setItem(
15         "type-tutor-last-track",
16         selectedTrack
17     );
18     return selectedTrack;
19 }

```

Listing 6.4 – Level Navigation Logic

```

1  /* Level Navigation Logic */
2  btn.addEventListener("click", () => {
3      window.location.href = `./levels/level${i}.html`;
4  });
5
6  grid.appendChild(btn);
7
8  /* Create Level Grid Dynamically */
9  const numberSpan = document.createElement("span");
10 numberSpan.className = "level-number";
11 numberSpan.textContent = i;
12
13 btn.appendChild(numberSpan);
14

```

Listing 6.3: JavaScript implementation of the randomized background music selection, ensuring that a different audio track is played on each page refresh to provide a more engaging learning experience.

Listing 6.4: JavaScript implementation of the dynamic level navigation, enabling users to access typing lessons directly from the interactive level selection dashboard.

Outcome:

The redesigned Home page transformed the application into a centralized learning dashboard that combines intuitive navigation, learner progress visualization, motivational content, and personalized controls within a responsive interface. The improvements significantly enhanced usability, user engagement, and scalability while providing a consistent experience across different devices.

6.3 Typing Interface Enhancement

Objective:

The Typing Interface was enhanced to provide an interactive and engaging learning environment where users receive real-time feedback on their typing performance. The primary objective was to improve both the educational effectiveness and overall usability of the application by integrating live performance monitoring, visual guidance, and responsive interface elements.

Design and Implementation:

The Typing Interface was redesigned to create a structured, distraction-free learning environment with immediate feedback throughout each typing session. The layout displays the typing exercise, performance statistics, and interactive controls in a clear, intuitive manner, allowing users to focus on improving typing skills.

Real-time performance indicators, including Words Per Minute (WPM), typing accuracy, and session timer, update dynamically during typing. An interactive virtual keyboard with finger-placement guidance and active key highlighting provides immediate visual assistance, improving accuracy and making learning more intuitive for beginners.

Additional enhancements include theme switching, background music, responsive layouts, and smooth interface animations across desktop, tablet, and mobile devices.

Technical Highlights:

- Integrated real-time WPM, typing accuracy, and timer calculations for continuous performance evaluation.
- Developed an interactive virtual keyboard with finger-placement guidance to improve typing habits.
- Implemented active key highlighting to provide immediate visual assistance during typing exercises.
- Added customizable themes, responsive layouts, and smooth interface animations.
- Enhanced learner engagement through immersive background music and intuitive navigation controls.
- Optimized the interface to provide a consistent experience across multiple screen sizes and devices.

Listing 6.5 – Real-Time WPM & Accuracy Calculation

```
JS typing-stats.js

1  /* Real-Time WPM & Accuracy Calculation */
2  const minutes = elapsedTime / 60;
3
4  const wpm =
5    minutes > 0
6      ? Math.round((correctCharacters / 5) / minutes)
7      : 0;
8
9  const accuracy =
10    totalTyped > 0
11      ? Math.round((correctCharacters / totalTyped) * 100)
12      : 100;
13
14  wpmElement.textContent = wpm;
15  accuracyElement.textContent = `${accuracy}%`;
```

Listing 6.6 — Active Key Highlighting (Virtual Keyboard)

```
JS virtual-keyboard.js

1  /* Virtual Keyboard Highlight */
2  function highlightKey(expectedKey) {
3
4    document
5      .querySelectorAll(".keyboard-key")
6      .forEach(key =>
7        | key.classList.remove("active"));
8
9    const activeKey =
10      document.querySelector(
11        | `[data-key="${expectedKey}"]`
12      );
13
14    if (activeKey) {
15      activeKey.classList.add("active");
16    }
17  }
```

Listing 6.5: JavaScript implementation of the real-time WPM and typing accuracy calculation performed continuously during each typing session.

Listing 6.6: JavaScript implementation of the virtual keyboard highlighting logic that visually indicates the expected key, helping learners improve finger placement and typing accuracy.

Outcome:

The enhanced Typing Interface transformed the application into an interactive learning environment by combining real-time performance monitoring, visual typing guidance, and responsive interface design. These improvements significantly increased learner engagement while supporting the development of typing speed, accuracy, and proper finger placement through continuous feedback and intuitive interaction.

7. Challenges Faced and Solutions

7.1 Introduction

During the development of the Typing Tutor Web Application, several technical and design-related challenges were encountered while implementing new features and improving the existing interface. These challenges provided valuable learning opportunities in responsive design, user experience, debugging, and performance optimization. Each issue was addressed through careful analysis, iterative testing, and continuous refinement, resulting in a more stable and user-friendly application.

Table 7.1 – Challenges Faced During Development

Challenge	Solution Implemented
Responsive background image displayed inconsistently on different screen sizes.	Replaced the static background with a responsive gradient layout and flexible UI components.
The initial interface lacked visual engagement for young learners.	Added mascots, animations, progress indicators, daily tips, and interactive UI elements.
Organizing multiple dashboard features without affecting usability.	Designed a structured navigation system with a sidebar, settings panel, and grouped controls.
Synchronizing live WPM, accuracy, timer, and keyboard interactions.	Optimized JavaScript event handling and updated performance metrics dynamically.
Maintaining responsiveness across different devices and resolutions.	Applied responsive CSS layouts, flexible spacing, and iterative cross-device testing.
Debugging integration and UI inconsistencies during development.	Performed continuous testing, manual debugging, and code refinement to improve stability and user experience.

Most of the challenges encountered during the internship were related to balancing visual design with functional requirements. Developing an interface that was both attractive and responsive required multiple iterations, particularly when adapting layouts for different screen sizes.

Real-time performance monitoring and interactive typing assistance also required careful integration to ensure smooth user interaction. Regular testing, debugging, and mentor feedback played an important role in refining the application and improving its overall quality.

Outcome:

Successfully resolving these challenges strengthened problem-solving abilities, improved front-end development practices, and provided practical experience in responsive web design, debugging, user interface optimization, and iterative software development. The experience also reinforced the importance of testing, continuous improvement, and collaborative development in real-world projects.

8. Learning Outcomes

8.1 Technical Knowledge and Skills

The internship significantly strengthened my understanding of front-end web development by providing practical experience in designing and developing an interactive educational web application. I enhanced my proficiency in HTML5, CSS3, and Vanilla JavaScript while implementing responsive user interfaces, interactive components, and real-time application features.

I also gained hands-on experience with responsive layouts, CSS animations, DOM manipulation, event handling, local storage, version control using Git, and application deployment through Netlify. Working on a live project enabled me to understand how individual technologies integrate to build a complete and user-friendly web application.

8.2 Software Development Experience

Working on an existing software project provided valuable exposure to real-world development practices. I learned how to analyze an established codebase, understand modular project architecture, and implement new features without affecting existing functionality.

Throughout the internship, I followed coding standards, participated in regular code reviews, maintained project documentation, and continuously tested and refined the application. The experience also strengthened my debugging skills, problem-solving abilities, and understanding of iterative software development under mentor guidance.

8.3 Professional and Personal Growth

Beyond technical knowledge, the internship helped me develop confidence in approaching complex development tasks and solving practical software engineering problems. It improved my ability to analyse user interface requirements, convert design ideas into functional implementations, and balance usability with visual design.

Regular interactions with mentors and continuous feedback encouraged me to adopt a more structured and professional approach to software development. Overall, the internship enhanced my technical competence, communication skills, attention to detail, and readiness to contribute effectively to future software development projects.

8.4 Understanding User-Centered Design

One of the most valuable outcomes of this internship was understanding the importance of user-centered design in educational software development. While implementing various interface components, I learned that an effective application is not defined solely by its functionality but also by how easily users can interact with it.

Designing child-friendly interfaces, improving accessibility, organizing content logically, and incorporating engaging visual elements helped me appreciate the significance of usability and user experience in modern web applications. This experience strengthened my ability to develop software that is both technically efficient and intuitive for end users.

9. Conclusion

The 8-week internship at Sri Sathya Sai Vidya Vahini provided an excellent opportunity to apply academic knowledge to the development of a real-world educational web application. Throughout the internship, I actively contributed to the design and enhancement of the Typing Tutor Web Application by developing responsive user interfaces, implementing interactive features, improving user experience, and refining application functionality through continuous testing and optimization.

Working on an existing software project allowed me to gain practical experience in understanding project architecture, following coding standards, collaborating under mentor guidance, and maintaining development documentation. The internship also strengthened my technical skills in front-end web development while improving my problem-solving ability, debugging techniques, and understanding of user-centered interface design.

Overall, this internship has been a valuable learning experience that enhanced both my technical competence and professional confidence. The knowledge and practical exposure gained during this period have prepared me to contribute effectively to future software development projects while continuing to build innovative, accessible, and user-focused applications.

Alaghari Saipreetam

*Sri Sathya Sai Vidya Vahini
Internship Duration: 8 Weeks*

10. Project Deliverables

The following resources were developed and maintained as part of the internship project:

10.1 Deployed Application

Live Website:

<https://bit.ly/vvtypingapp>

10.2 Source Code Repository

GitHub Repository:

<https://github.com/Saipreetam2228/Accessible-Typing-Tutor-Learning-System/tree/main>

10.3 Source Code Archive

Project Source Archive: [Drive Link](#)

10.4 User Instructions

To use the Typing Tutor Web Application:

1. Open the deployed application using the provided URL.
2. Select the desired class and proceed to the Home page.
3. Choose a typing level from the available list.
4. Read the typing instructions before starting the exercise.
5. Begin typing while following the on-screen virtual keyboard guidance.
6. Monitor live performance indicators including WPM, Accuracy, and Timer.
7. Complete the typing activity to view the final performance summary.
8. Navigate through different levels, customize themes, and continue practicing to improve typing skills.
